

Fully automatic 320 kV 6 axes digital X-ray cabinet

APPLICATIONS

Multi directions X-rays of complex objects :
castings, weldings on plates and tubes, items made of composite materials,

KEY FEATURES

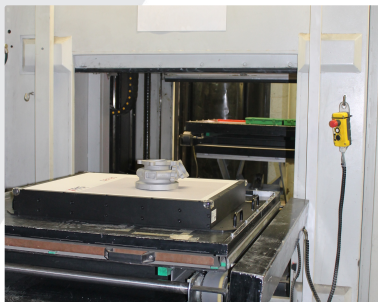

6 axes Astrolabe
manipulator

Very user-friendly
positions and sequences
recording

Automatic and fast

Digital

Flexibility - Options

► The Astrolabe manipulator will allow you to X-ray every details of your samples in all directions. Astrolabe also has a great advantage : it is much more affordable than a robot.

► X-RIS has been so innovative in the manipulator position sequences recordings that X-RIS is registering a worldwide patent.

► Record the manipulator positions and sequences, launch the sequences and save huge amount of time and costs in comparison with manual handling. One X-ray image acquisition lasts 45", manipulator positioning and kV stabilisation time included !

► (DICONDE, PR 5250, NADCAP,)

► According to your needs, X-RIS can supply different X-ray generators (up to 320 kV), different tubes with different focal spots (down to micro), DDA (with different active surface and resolution,
